1 Implementation Details

I began by cloning the repository on my terminal since it required a conda environment that doesn't run on kaggle/colab.

Instead, if you don't want to create a conda environment like when I tried running on colab/kaggle, download these given below. However, it runs into a version mismatch for typing-extensions and a few other libraries. I tried various combinations by upgrading and downgrading other libraries but that resulted in the code malfunctioning.

2 Results

3 Dataset Description

The code runs on the dataset provided already in the repo, it is present in the GitHub link provided already, in its /data folder. The face detection runs on 512 X 512 png images.
